 **Hotpoint**

Installation

GB

- ! Keep this instruction manual in a safe place for future reference. Should the appliance be sold, transferred or moved, make sure the instruction manual accompanies the washing machine to inform the new owner as to its operation and features.
- ! Read these instructions carefully: they contain vital information on installation, use and safety.

Unpacking and levelling

Unpacking

- ! This is a separate part of the polystyrene base and should be removed with the base.
- ! **IMPORTANT** check when unpacking your machine.

1. Unpack the washing machine.
2. Check whether the washing machine has been damaged during transport. If this is the case, do not install it and contact your retailer.

3. Remove the 4 protective screws and the rubber bush with the respective spacer, situated on the rear of the appliance (see also the installation leaflet).

4. Seal the gaps using the plastic plugs provided.
 5. Keep all the parts: you will need them again if the washing machine needs to be moved to another location.
- ! Packaging materials are not children's toys.

Levelling

- Your machine may make a considerable amount of noise if the two front feet have not been adjusted correctly.
1. Install the washing machine on a flat sturdy floor, without resting it up against walls, furniture cabinets or other.

2. If the floor is not perfectly level, compensate for any unevenness by tightening or loosening the adjustable front feet (see figure); the angle of inclination, measured according to the worktop, must not exceed 2°.

Levelling your appliance correctly will provide it with stability and avoid any vibrations, noise and shifting during operation. If it is placed on a fitted or loose carpet, adjust the feet in such a way as to allow enough room for ventilation beneath the washing machine.

Electric and water connections

Connecting the water inlet hose

1. Connect the supply pipe by screwing it to a cold water tap using a 3/4 gas threaded connection (see figure). Before performing the connection, allow the water to run freely until it is perfectly clear.

2. Connect the other end of the water inlet hose to the washing machine, screwing it onto the appliance's cold water inlet, situated on the top right-hand side on the rear of the appliance (see figure).

3. Make sure there are no kinks or bends in the hose.

- ! The water pressure at the tap must be within the values indicated in the Technical details table (on the page 5).

- ! If the water inlet hose is not long enough, contact a specialist store or an authorised serviceman.

- ! Ensure that the supply taps are allowing water through. Old taps may seize in the closed position and thus prevent water reaching the machine.

Connecting the drain hose

Connect the drain hose, without bending it, to a draining duct or a wall drain situated between 65 and 100 cm from the floor;

The drain hose may be connected to an under-sink trap. Before connecting the drain hose from the machine ensure that any blanks or removable ends have been taken off the spigot.

If it is placed over the edge of a basin or sink be sure the free end of the hose should not be underwater.

! We advise against the use of hose extensions; in case of absolute need, the extension must have the same diameter as the original hose and must not exceed 150 cm in length.

Ensure that if the drain hose is pushed into a standpipe, that the end does not go down more than 15cms (6 inches). If the hose is pushed down too far, this may cause the machine to self -syphon ie. continuously empty as it is filling.

Electric connection

Before plugging the appliance into the mains socket, make sure that:

- the socket is earthed and in compliance with the applicable law;
- the socket is able to sustain the appliance's maximum power load indicated in the Technical details table (see page 5);

- the supply voltage is included within the values indicated on the Technical Data Plate fixed on the machine;
- the socket is compatible with the washing machine's plug. If this is not the case, replace the socket or the plug.

Your appliance is now supplied with a 13 amp fused plug it can be plugged into a 13 amp socket for immediate use. Before using the appliance please read the instructions below.

**WARNING - THIS APPLIANCE MUST BE EARTHED.
THE FOLLOWING OPERATIONS SHOULD BE CARRIED OUT BY A QUALIFIED ELECTRICIAN.**

Replacing the fuse:

When replacing a faulty fuse, a 13 amp ASTA approved fuse to BS 1362 should always be used, and the fuse cover re-fitted. If the fuse cover is lost, the plug must not be used until a replacement is obtained.

Replacement fuse covers:

If a replacement fuse cover is fitted, it must be of the correct colour as indicated by the coloured marking or the colour that is embossed in words on the base of the plug. Replacements can be obtained directly from your nearest Service Depot.

Removing the plug:

If your appliance has a non-rewireable moulded plug and you should wish to re-route the mains cable through partitions, units etc., please ensure that either: the plug is replaced by a fused 13 ampere rewireable plug bearing the BSI mark of approval.

or:

the mains cable is wired directly into a 13 amp cable outlet, controlled by a switch, (in compliance with BS 5733) which is accessible without moving the appliance.

Disposing of the plug:

Ensure that before disposing of the plug itself, you make the pins unusable so that it cannot be accidentally inserted into a socket.

Instructions for connecting cable to an alternative plug:
Important: the wires in the mains lead are coloured in accordance with the following code:

Green & Yellow	Earth
Blue	Neutral
Brown	Live

As the colours of the wires in the lead may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:
 Connect Green & Yellow wire to terminal marked **E** or \AA or coloured Green or Green & Yellow.
 Connect Brown wire to terminal marked **L** or coloured Red.
 Connect Blue wire to terminal marked **N** or coloured Black.

If a 13 amp plug (BS 1363) is used it must be fitted with a 13 amp fuse, either in the plug or adaptor or at the distribution board.

If you are in any doubt regarding the electrical supply to your machine, consult a qualified electrician before use.

How to connect an alternative plug:

The wires in this mains lead are coloured in accordance with the following code:

BLUE	NEUTRAL (N)
BROWN	LIVE (L)
GREEN & YELLOW	EARTH (E)

Disposing of the appliance:

When disposing of the appliance please remove the plug by cutting the mains cable as close as possible to the plug body and dispose of it as described above.

! The washing machine should not be installed in an outdoor environment, not even where the area is sheltered, because it may be very dangerous to leave it exposed to damp, rain and thunderstorms.

! When the Washer-dryer is installed, the mains socket must be within easy reach.

! Do not use extensions or multiple sockets.

! The power supply cable must never be bent or dangerously compressed.

! The power supply cable must only be replaced by an authorised serviceman.

Warning! The company denies all liability if and when these norms are not respected.

The first wash cycle

Once the appliance has been installed, and before you use it for the first time, run a wash cycle with detergent and no laundry, using the wash cycle **1**.

Technical data	
Model	WDF 740 P/G/A/K/X
Dimensions	width 59.5 cm height 85 cm depth 53.5 cm
Capacity	from 1 to 7 kg for the wash programme from 1 to 5 kg for the drying programme
Electrical connections	please refer to the technical data plate fixed to the machine
Water connections	maximum pressure 1 MPa (10 bar) minimum pressure 0.05 MPa (0.5 bar) drum capacity 52 litres
Spin speed	up to 1400 rotations per minute
Energy rated programmes according to regulation EN 50229	Wash: programme 1; temperature 60°C; using a load of 7 kg. Drying: first drying cycle performed with 2 kg load, by selecting the  dryness level.; the second drying cycle performed with 5 kg load, by selecting the  dryness level.
  This appliance conforms to the following EC Directives: - 2004/108/EC (Electromagnetic Compatibility) - 2006/95/EC (Low Voltage) - 2002/96/EC	

Description of the Washer-dryer and starting a wash cycle

GB

Control panel

Detergent dispenser drawer: used to dispense detergents and washing additives (see "Detergents and laundry").

ON/OFF button: switches the machine on and off.

WASH CYCLE knob: programmes the wash cycles. During the wash cycle, the knob does not move.

DRYING button: used to set the desired drying programme (see "Personalisation").

TEMPERATURE button: sets the temperature or the cold wash cycle (see "Personalisation").

DISPLAY: indicates the time remaining for the selected wash cycle and, if a delayed start has been programmed, the time remaining until the start of the wash cycle.

CHILD LOCK button with indicator light: activates or deactivates the control panel lock.

FUNCTION buttons with indicator light: used to select the available functions. The indicator light corresponding to the selected function will remain lit.

WASH CYCLE PROGRESS indicator lights: used to monitor the progress of the wash cycle. The illuminated indicator light shows which phase is in progress.

DOOR LOCKED indicator light: indicates whether the door may be opened or not (see next page).

START/PAUSE button with indicator light: starts or temporarily interrupts the wash cycles.

N.B. To pause the wash cycle in progress, press this button; the corresponding indicator light will flash orange, while the indicator light for the current wash cycle phase will remain lit in a fixed manner. If the **DOOR LOCKED** indicator light is switched off, the door may be opened (wait approximately 3 minutes). To start the wash cycle from the point at which it was interrupted, press this button again.

Standby mode

This washing machine, in compliance with new energy saving regulations, is fitted with an automatic standby system which is enabled after about 30 minutes if no activity is detected. Press the ON-OFF button briefly and wait for the machine to start up again.

Indicator lights

The indicator lights provide important information. This is what they can tell you:

Wash cycle phase indicator lights

As the WASH CYCLE knob is rotated, the indicator lights illuminate, indicating the stages which will be performed by the machine in accordance with the selected wash cycle.

Once the desired wash cycle has been selected and has begun, the indicator lights switch on one by one to indicate which phase of the cycle is currently in progress.

Wash	
Rinse	
Spin	
Dry	
End of wash cycle	

Note: as soon as a drying level or time period has been set, this indicator light illuminates to indicate that the selected wash cycle will be followed by a drying phase.

Note: during the "Drain" phase, the indicator light corresponding to the "Spin" cycle phase will illuminate.

Function buttons and corresponding indicator lights

When a function is selected, the corresponding indicator light will illuminate.

If the selected function is not compatible with the programmed wash cycle, the corresponding indicator light will flash, a sound signal will be emitted and the function will not be activated.

If a function which is incompatible with another function selected previously, only the most recent selection will remain active.

Starting a wash cycle

1. Switch the washing machine on by pressing the ON/OFF button. All the indicator lights will turn on for a few seconds, then only the indicator lights relative to the selected programme settings will remain lit and the START/PAUSE indicator light will flash.
2. Load the laundry and close the door.
3. Set the WASH CYCLE knob to the desired programme.
4. Set the washing temperature (see "Personalisation").
5. Set the drying cycle if necessary (see "Personalisation").
6. Measure out the detergent and washing additives (see "Detergents and laundry").
7. Select the desired functions.
8. Start the wash cycle by pressing the START/PAUSE button and the corresponding indicator light will remain lit in a fixed manner, in green. To cancel the set wash cycle, pause the machine by pressing the START/PAUSE button and select a new cycle.
9. At the end of the wash cycle the END indicator light will switch on. The DOOR LOCKED indicator light will switch off, indicating that the door may be opened (wait approximately 3 minutes). Take out your laundry and leave the appliance door ajar to make sure the drum dries completely. Switch the washer-dryer off by pressing the ON/OFF button.

Temperature indicator light

When a temperature value is selected, the corresponding indicator light will illuminate.

Drying indicator light

When a drying value is selected, the corresponding indicator light will illuminate.

Child lock indicator light

To **activate** the control panel lock, press and hold the button for approximately 2 seconds. When the indicator light is illuminated, the control panel is locked. This means it is possible to prevent wash cycles from being modified accidentally, especially where there are children in the home.

To **deactivate** the control panel lock, press and hold the button for approximately 2 seconds.

Door locked indicator light

If this indicator light is on, the appliance door is locked to prevent it from being opened accidentally; to avoid any damage, wait for the indicator light to switch off before you open the appliance door (wait approximately 3 minutes).

N.B. If the DELAY TIMER function is activated, the door cannot be opened; pause the machine by pressing the START/PAUSE button if you wish to open it.

! If the START/PAUSE indicator light (orange) flashes rapidly at the same time as the function indicator light, this indicates a problem has occurred (see "Troubleshooting").

Wash cycles

GB

Table of wash cycles

Wash cycles	Description of the wash cycle	Max. temp. (°C)	Max. speed (rpm)	Drying	Detergents		Max. load (kg)		Cycle duration
					Wash	Fabric softener	Normal	Mini load	
Essentials cycles									
1	Cottons: extremely soiled whites.	90°	1400	●	●	●	7	3	
1	Cottons (1): heavily soiled whites.	60°	1400	●	●	●	7	3	
1	Cottons (2): lightly soiled whites and delicate colours.	40°	1400	●	●	●	7	3	
2	Cottons: heavily soiled whites and resistant colours.	60°	1400	●	●	●	7	3	
3	Coloureds Cottons (3): lightly soiled and delicate colours.	40°	1400	●	●	●	7	3	
4	Synthetics: heavily soiled resistant colours.	50°	800	●	●	●	3	1.5	
5	Fastwash 60': to refresh lightly soiled garments quickly (not suitable for wool, silk and clothes which require washing by hand).	60°	1400	●	●	●	3	-	
Special cycles									
6	Baby cycle: heavily soiled delicate colours.	40°	800	●	●	●	2	1	
7	Shirts	40°	600	●	●	●	2	1	
8	Ready to wear (*)	30°	800	●	●	●	1	-	
9	Wool: for wool, cashmere, etc.	40°	800	●	●	●	1.5	1	
10	Silk: for garments in silk and viscose, lingerie.	30°	0	-	●	●	1	1	
Drying cycles									
11	Cottons	-	-	●	-	-	5	-	
12	Synthetics	-	-	●	-	-	3	-	
13	Wool	-	-	●	-	-	1.5	-	
Partials wash cycles									
A	Rinse Fast	-	1400	●	-	●	7	3	
B	Spin Fast	-	1400	●	-	-	7	-	
C	Pump out	-	0	-	-	-	7	-	

The duration of the wash cycles can be checked on the display.

The length of cycle shown on the display or in this booklet is an estimation only and is calculated assuming standard working conditions. The actual duration can vary according to factors such as water temperature and pressure, the amount of detergent used, the amount and type of load inserted, load balancing and any wash options selected.

For all Test Institutes:

- 1) Test wash cycle in compliance with regulation EN 50229: set wash cycle 1 with a temperature of 60°C.
- 2) Long wash cycle for cottons: set wash cycle 1 with a temperature of 40°C.
- 3) Short wash cycle for cottons: set wash cycle 3 with a temperature of 40°C.

(*) Ready to Wear

This cycle was designed to wash and dry lightly soiled small loads quickly. By selecting this cycle it is possible to wash and dry a maximum load of 1 kg in just 60 minutes.

! Please note, this is an automatically programmed wash and dry cycle, therefore it is not possible to manually set a drying time or drying level in conjunction with this cycle.

! Please note, the Drying indicator illuminates only during the drying phase of the cycle, not when the cycle is first selected.

Anti-crease

This function interrupts the wash programme, and the washing is left to soak in water before the appliance is drained. It is automatically activated with programme **10** (Silk) and helps to prevent the formation of creases. To complete the cycle press the START/PAUSE button.

Personalisation

Setting the temperature

By pressing the TEMPERATURE button to set the wash temperature (see Table of wash cycles).

The temperature may be lowered, or even set to a cold wash (cold water).

The washer-dryer will automatically prevent you from selecting a temperature which is higher than the maximum value set for each wash cycle.

Setting the drying cycle

The desired drying cycle type may be set by pressing the DRYING button once or several times. Two options are available:

A - Based on time: from **40** to **180** minutes.

B - Based on the how damp the clothes are once they have been dried:

Iron dry : slightly damp clothes, easy to iron.

Cupboard dry : very dry clothes, recommended for towelling and bathrobes.

If your laundry load to be washed and dried is much greater than the maximum stated load (see adjacent table), perform the wash cycle, and when the cycle is complete, divide the garments into groups and put some of them back in the drum. At this point, follow the instructions provided for a "**Drying only**" cycle. Repeat this procedure for the remainder of the load.

N.B.: when the drying is complete there is a cooling period, even though the DRYING button is in the **0** position.

Drying only

Turn the WASH CYCLE knob to one of the drying settings (**11-12-13**) according to the type of fabric, then select the desired drying duration using the DRYING button.

Functions

The various wash functions available with this Washer-dryer will help to achieve the desired results, every time.

To activate the functions:

1. Press the button corresponding to the desired function;
2. the function is enabled when the corresponding indicator light is illuminated.

Note: If the indicator light flashes rapidly, this signals that this particular function may not be selected in conjunction with the selected wash cycle.

Delay Start

To set a delayed start for the selected wash cycle, press the button repeatedly until the desired delay time is displayed (this may be between 1 hour and 24 hours).

To disable the function press the button until the text **OFF** is displayed.

N.B. Once you have pressed the START/PAUSE button, the delay time may only be decreased if you wish to modify it.

- !** This option is enabled with all programmes.

Mini Load

This function is recommended for when the load of laundry is equal to half, or less than half, of the maximum recommended load (see Table of wash cycles).

- !** This function may not be used in conjunction with wash cycles 5, 8, 11, 12, 13, B, C.

Super Wash

Because a greater quantity of water is used in the initial phase of the cycle, and because of the increased cycle duration, this function offers a high-performance wash.

- !** This function may not be used in conjunction with wash cycles 5, 8, 9, 10, 11, 12, 13, A, B, C.

Slow Spin (1400-600)

By selecting this function, reduces the spin speed.

- !** This function may not be used in conjunction with wash cycles 8, 10, 11, 12, 13, C.

Table of Drying times (guideline values)

Fabric type	Load type	Max. load (kg)	Cupboard dry	Iron dry
Cotton	Clothing of different sizes, Terry towels	5	180	140
Synthetics	Sheets, Shirts, Pyjamas, socks, etc.	3	140	100
Wool	Knitwear, Pullovers, etc.	1.5	150	120

Detergents and laundry

GB

Detergent dispenser drawer

Good washing results also depend on the correct dose of detergent: adding too much detergent will not necessarily result in a more efficient wash, and may in fact a build up on the inside of your appliance and contribute to environmental pollution.

! Do not use hand washing detergents because these create too much foam.

Open the detergent dispenser drawer and pour in the detergent or washing additive, as follows.

! Do not pour detergent into the middle compartment (*). Detergent should only be poured into the compartment 1.

compartment 1: Detergent for the wash cycle (powder or liquid)

For best results liquid detergent should be poured in the dispenser immediately before the start of the programme.

compartment 2: Additives (fabric softeners, etc.)

The fabric softener should not overflow the grid.

Preparing the laundry

- Divide the laundry according to:
 - the type of fabric/the symbol on the label
 - the colours: separate coloured garments from whites.
- Empty all garment pockets and check the buttons.
- Do not exceed the listed values, which refer to the weight of the laundry when dry:
 - Durable fabrics: max. 7 kg
 - Synthetic fabrics: max. 3 kg
 - Delicate fabrics: max. 2 kg
 - Wool: max. 1,5 kg
 - Silk: max. 1 kg

How much does your laundry weigh?

- 1 sheet 400-500 g
- 1 pillow case 150-200 g
- 1 tablecloth 400-500 g
- 1 bathrobe 900-1200 g
- 1 towel 150-250 g

Garments requiring special care

Baby cycle: this wash cycle 6 can be used to remove the soiling typically caused by babies, while ensuring that all detergent is removed from nappies in order to prevent the delicate skin of babies from suffering allergies. The cycle has been designed to reduce the amount of bacteria by using a greater quantity of water and optimising the effect of special disinfecting additives added to the detergent.

At the end of the wash cycle, the machine will slowly rotate the drum to prevent the formation of creases; to end the cycle press the START/PAUSE button.

Shirts: use special wash cycle 7 to wash shirts in various fabrics and colours.

It guarantees maximum care is taken of the garments and minimises the formation of creases.

Wool: all wool garments can be washed using programme 9, even those carrying the "hand-wash only" label. For best results, use special detergents and do not exceed 1,5 kg of laundry.

Silk: use special wash cycle 10 to wash all silk garments. We recommend the use of special detergent which has been designed to wash delicate clothes.

Curtains: fold curtains and place them in a pillow case or mesh bag. Use wash cycle 10.

Load balancing system

Before every spin cycle, to avoid excessive vibrations and to distribute the load in a uniform manner, the drum rotates continuously at a speed which is slightly greater than the washing rotation speed. If, after several attempts, the load is not balanced correctly, the machine spins at a reduced spin speed. If the load is excessively unbalanced, the Washer-dryer performs the distribution process instead of spinning. To encourage improved load distribution and balance, we recommend small and large garments are mixed in the load.

Precautions and tips

! This Washer-dryer was designed and constructed in accordance with international safety regulations. The following information is provided for safety reasons and must therefore be read carefully.

General safety

- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.
 - Do not dry unwashed items in the tumble dryer.
 - Items that have been soiled with substances such as cooking oil, acetone, alcohol, petrol, kerosene, spot removers, turpentine, waxes and wax removers should be washed in hot water with an extra amount of detergent before being dried in the tumble dryer.
 - Items such as foam rubber (latex foam), shower caps, waterproof textiles, rubber backed articles and clothes or pillows fitted with foam rubber pads should not be dried in the tumble dryer.
 - Fabric softeners, or similar products, should be used as specified by the fabric softener instructions.
 - The final part of a tumble dryer cycle occurs without heat (cool down cycle) to ensure that the items are left at a temperature that ensures that the items will not be damaged.

WARNING: Never stop a tumble dryer before the end of the drying cycle unless all items are quickly removed and spread out so that the heat is dissipated.

- This appliance was designed for domestic use only.
- Do not touch the machine when barefoot or with wet or damp hands or feet.
- Do not pull on the power supply cable when unplugging the appliance from the electricity socket. Hold the plug and pull.
- Do not open the detergent dispenser drawer while the machine is in operation.
- Do not touch the drained water as it may reach extremely high temperatures.
- Never force the porthole door. This could damage the safety lock mechanism designed to prevent accidental opening.
- If the appliance breaks down, do not under any circumstances access the internal mechanisms in an attempt to repair it yourself.
- Always keep children well away from the appliance while it is operating.
- The door can become quite hot during the wash cycle.
- If the appliance has to be moved, work in a group of two or three people and handle it with the utmost care. Never try to do this alone, because the appliance is very heavy.
- Before loading laundry into the Washer-dryer, make sure the drum is empty.
- During the drying phase, the door tends to get quite hot.
- Do not use the appliance to dry clothes that have been washed with flammable solvents (e.g. trichloroethylene).
- Do not use the appliance to dry foam rubber or similar elastomers.
- Make sure that the water tap is turned on during the drying cycles.

Disposal

- Disposing of the packaging materials: observe local regulations so that the packaging may be re-used.
- The European Directive 2002/96/EC on Waste Electrical and Electronic Equipment, requires that old household electrical appliances must not be disposed of in the normal unsorted municipal waste stream. Old appliances must be collected separately in order to optimise the recovery and recycling of the materials they contain and reduce the impact on human health and the environment. The crossed out "wheeled bin" symbol on the product reminds you of your obligation, that when you dispose of the appliance it must be separately collected. Consumers should contact their local authority or retailer for information concerning the correct disposal of their old appliance.

GB

Care and maintenance

GB

Cutting off the water and electricity supplies

- Turn off the water tap after every wash cycle. This will limit wear on the hydraulic system inside the washing machine and help to prevent leaks.
- Unplug the washing machine when cleaning it and during all maintenance work.

Cleaning the washing machine

The outer parts and rubber components of the appliance can be cleaned using a soft cloth soaked in lukewarm soapy water. Do not use solvents or abrasives.

Note (only for INOX model): the external surfaces of the machine and the control panel may be cleaned using a non-abrasive cloth which has been dampened with water. Do not use solvents or abrasive product.

Cleaning the detergent dispenser drawer

Remove the dispenser by raising it and pulling it out (see figure).

Wash it under running water; this operation should be repeated frequently.

Caring for the door and drum of your appliance

- Always leave the porthole door ajar in order to prevent unpleasant odours from forming.

Cleaning the pump

The washing machine is fitted with a self-cleaning pump which does not require any maintenance. Sometimes, small items (such as coins or buttons) may fall into the pre-chamber which protects the pump, situated in its bottom part.

! Make sure the wash cycle has finished and unplug the appliance.

To access the pre-chamber:

1. using a screwdriver, remove the cover panel on the lower front part of the washing machine (see figure);

2. unscrew the lid by rotating it anti-clockwise (see figure): a little water may trickle out. This is perfectly normal;

3. clean the inside thoroughly;
4. screw the lid back on;
5. reposition the panel, making sure the hooks are securely in place before you push it onto the appliance.

Checking the water inlet hose

Check the inlet hose at least once a year. If there are any cracks, it should be replaced immediately: during the wash cycles, water pressure is very strong and a cracked hose could easily split open.

! Never use second-hand hoses.

Troubleshooting

Your Washer-dryer could fail to work. Before contacting the Technical Assistance Centre (see "Assistance"), make sure that the problem cannot be solved easily using the following list.

GB

Problem:

The machine does not switch on.

The wash cycle does not start.

The machine does not dry.

The clothes are too hot when the drying cycle is finished.

The machine does not fill with water or the indicator light for the first wash cycle stage flashes rapidly.

The machine continuously fills with water and continually drains away or Water left in the drum or Stuck on wash.

The machine does not drain or spin - 'START/PAUSE' flashing orange.

The wash programme takes too long.

The Display sticks at one 'time to end' for more than 1 Minute or the Display changes the estimated 'Time to End' during the programme.

The machine vibrates a lot during the spin cycle.

Possible causes / Solutions:

- The appliance is not plugged into the socket fully, or not enough to make contact.
- There is no power to the socket, or the fuse has blown in the mains plug.
- The door is not closed properly.
- The ON/OFF button has not been pressed.
- The START/PAUSE button has not been pressed.
- The water tap has not been turned on to allow water to flow into the machine.
- The 'DELAY TIMER' has been selected.
- The 'CHILD LOCK' is activated (see 'The machine just 'beeps' when a programme or option is selected' below)
- Check the 2 sections above.
- The 'DRY' button has been pressed to exclude drying.
- A cooling-down period is always added to the end of each drying cycle. If the clothes appear too hot to handle leave the door open to allow to cool further before removing from the machine.
- The water inlet hose is kinked.
- The water inlet hose is not connected to the water supply.
- The water pressure is too low.
- The water tap has not been turned on to allow water to flow into the machine.
- There is no water supply to the house.
- The inlet valve filter is blocked.
- The START/PAUSE button has not been pressed.
- The top of the drain hose is too low - It must be fitted at a height between 65 and 100 cm from the floor (see "Installation").
- The drain hose is connected incorrectly to the sink trap allowing water to run into the machine, the drain hose must be positioned higher than the bottom of the sink to prevent water flowing down the drain hose.
- The end of the drain hose has been pushed too far down the standpipe, the 'U' bracket should be fitted 100 mm from the end of the drain hose.
- The Pump filter is blocked - (see Care & Maintenance).
- The drain hose is kinked.
- New Installation - The blanking cap or spigot has not been removed if connected under a sink.
- The drain hose or sink trap is blocked.
- Programme times will vary due to water pressure, the incoming water temperature and if the wash load goes out of balance. This will increase the programme time accordingly (see 'The machine wont spin properly' below) - (Most Common Cause!).
- The display time is for guidance only - **it is not a precise time to finish and may vary.**
- The feet have not been adjusted, enabling the machine to rock.
- New Installation - Either the Transit Bolts including the plastic spacers, or the Polystyrene Packaging have not been removed when installing the machine.
- The machine is trapped between cabinets and/or walls.
- The load is in a slight out of balance condition and machine is spinning, but at a lower speed.

- The machine is noisy.**
- There will always be some motor, pump and drum noise during spin.
- The machine wont spin properly.**
- Out of Balance detected when attempting to go into a spin cycle - If this happens the machine will continue to try to repeat the distribution of the load required before the machine will go into higher spin speeds - This will increase the programme time accordingly. This is a safety feature to prevent damage. Out of Balance can be caused by washing a single heavy item (eg duvet, quilt, etc). - Try the programme again using a different load.
- The machine leaks from the dispenser.**
- The dispenser drawer is blocked with detergent and requires cleaning.
 - The water pressure is too high and requires turning down - turn down the tap on the water supply pipe slightly and try again.
 - The machine is tilting forwards - It must be level when in its final position.
- The machine leaks (other than dispenser).**
- The fill hose is loose, check both the cabinet and tap ends.
 - The fill hose is tight but still leaks, if so replace the rubber washers, or the fill hose is missing the rubber washer.
 - The drain hose is not fixed in properly.
- The 'START/PAUSE' indicator light illuminates Orange and the function indicator lights flash rapidly.**
- Switch off the machine and unplug it, wait for approximately 1 minute and then switch it back on again If the problem persists contact the Technical Assistance Service.
- The machine smells.**
- The machine requires a service wash. Run a 90 degree wash cycle with detergent and no laundry.
- The machine door cannot be opened.**
- The door will not open until the door lock indicator light goes out shortly after the program has finished.
 - If there is no power to the machine you need to perform the manual unlocking procedure (*see Precautions & Tips*).
- Door Seal damaged at the bottom.**
- The door seal has drainage holes at the bottom - This is normal.
- The water level is too low when the machine is washing.**
- The water level is correct if it can be seen at the bottom of the door.
- The machine just 'beeps' when a programme or option is selected (Child Lock Symbol is lit).**
- Deactivate the Child Lock feature by pressing and holding in the 'CHILD LOCK' button for 2 seconds.
- There is too much foam.**
- The detergent is not suitable for machine washing (it should display the text 'for washing machines' or 'hand and machine wash' or the like).
 - Too much detergent was used - less detergent is required in soft water.
- After completing the programme, or before starting a programme, the machine has turned itself off (no lights).**
- To comply with new energy saving regulations the machine is fitted with an automatic standby system. Press 'ON/OFF' button for 3 seconds to activate the machine, it can then either be switched off or a new programme selected.
 - Your washing machine contains sensors that monitor progress during the wash cycle (eg: Water Levels, Temperatures, Out of Balance loads, Wash time/progress).
- Normally, if your machine successfully completes the cycle, there is unlikely to be anything wrong!
- General.**

Remember, you will be charged for a service call for problems caused by incorrect installation, as listed above.

Not emptying contents from pockets may cause pump or drain blockages, or may damage the machine.

Do not wash items which do not have a wash label, or wash items that are not intended as machine washable.

Guarantee

12 Months Parts and Labour Guarantee

Your appliance has the benefit of our manufacturer's guarantee, which covers the cost of breakdown repairs for twelve months from the date of purchase.

This gives you the reassurance that if, within that time, your appliance is proven to be defective because of either workmanship or materials, we will, at our discretion, either repair or replace the appliance at no cost to you.

This guarantee is subject to the following conditions:

- The appliance has been installed and operated correctly and in accordance with our operating and maintenance instructions.
- The appliance is used only on the electricity or gas supply printed on the rating plate.
- The appliance has been used for normal domestic purposes only.
- The appliance has not been altered, serviced, maintained, dismantled, or otherwise interfered with by any person not authorised by us.
- Any repair work must be undertaken by us or our appointed agent.
- Any parts removed during repair work or any appliance that is replaced become our property.
- The appliance is used in the United Kingdom or Republic of Ireland.

The guarantee **does not cover:**

- Damage resulting from transportation, improper use, neglect or interference or as a result of improper installation.
- Replacement of any consumable item or accessory . These include but are not limited to: plugs, cables, batteries, light bulbs, fluorescent tubes and starters, covers and filters.
- Replacement of any removable parts made of glass or plastic.

THIS GUARANTEE WILL NOT APPLY IF THE APPLIANCE HAS BEEN USED IN COMMERCIAL OR NON-DOMESTIC PREMISES.

5 Year Parts Guarantee

Hotpoint also offers you a free 5 year parts guarantee. This additional guarantee is conditional on you registering your appliance with us and the parts being fitted by one of our authorised engineers. There will be a charge for our engineer's time. To activate the extra parts warranty on your appliance, simply call our registration line on **08448 24 24 24 (ROI 01 230 0800)**.

Extended Guarantees

We offer a selection of repair protection plans that enable you to fully cover yourself against the expense of repair bills for the life of your policy. To find the ideal plan for you please call our advice line on

08448 226 226 (Republic of Ireland 01 230 0233).

Free Helpdesk Service

We have a dedicated team who can provide free advice and assistance with your appliance if you experience any technical difficulties within the first 90 days of ownership. Simply call our Hotpoint Service Hotline on **08448 224 224 (Republic of Ireland 0818 313 413)** for telephone assistance, or, where necessary, to arrange for an engineer to call. If we cannot resolve the technical problem we will replace your machine or, if you prefer, give you your money back.

After Sales Service

No one is better placed to care for your Hotpoint appliance during the course of its working life than us – the manufacturer.

Recycling & Disposal Information

As part of Hotpoint's continued commitment to helping the environment, Hotpoint reserves the right to use quality, recycled components to keep down customer costs and minimise material wastage.

Please dispose of packaging and old appliances carefully. To minimise the risk of injury to children, remove the door, plug and cut the mains cable off flush with the appliance. Dispose of these parts separately to ensure that the appliance can no longer be plugged into a mains socket, and the door
